PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience building and modernizing production systems across fintech, payments, SaaS, and enterprise environments. Led the end-to-end delivery and provider certification of a production SPEI integration processing real customer transfers, covering backend services, security, automated testing, and mobile integration. Experienced modernizing production Angular applications through incremental upgrades and component-library migrations with zero production downtime. Strong cross-platform mobile and backend experience with .NET MAUI, React Native, Flutter, ASP.NET Core, Java, Spring Boot, and Kafka. Hired directly by a client after independently leading delivery at IFD Technologies.

EDUCATION

B.Sc. in Computer Systems Engineering

Escuela Superior de Cómputo (ESCOM), Instituto Politécnico Nacional (IPN) | 2018 - 2024

Co-author of the peer-reviewed conference paper "Application for Locating Dogs in México City Through Pattern Recognition," presented at HCI International 2025 and published by Springer in CCIS.

DOI: https://doi.org/10.1007/978-3-032-12767-9_33

TECHNICAL SKILLS

Frontend: Angular, React, Next.js, Vue.js, Nuxt.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, TailwindCSS, Kendo UI, PrimeNG, TanStack Query, Zustand, Vuex, Pinia

Backend & APIs: ASP.NET Core, .NET, EF Core, C#, Java, Spring Boot, Node.js, Laravel (PHP), Python, REST APIs, GraphQL

Mobile & Desktop: .NET MAUI, React Native (Expo), Flutter, Kotlin (Android), WPF, WCF, XAML/MVVM, iOS, Android, BLE, QR/Camera Scanning

Architecture & Data: Microservices, Event-Driven Architecture, Transactional Outbox, Apache Kafka, SQL, PostgreSQL, Azure SQL, SQL Server, MySQL

Cloud & DevOps: Microsoft Azure, AWS, Google Cloud, Docker, Git, GitHub Actions, CI/CD, Linux, Vercel

Security & Testing: JWT, OAuth2/OIDC, RSA/AES Encryption, SHA256withRSA Signatures, Azure Key Vault, Managed Identity, xUnit, Testcontainers, Playwright, Jest

Practices: Scrum, Agile, Pull Requests, Code Review, Continuous Delivery

PROFESSIONAL EXPERIENCE

Full-Stack Engineer · OM Payments / Grupo Cumulus

Mexico City | Apr 2026 - Present

Hired directly from client engagement at IFD Technologies

- Designed and built from scratch an ASP.NET Core (.NET 10) SPEI integration through a provider operating as an indirect participant, including webhook APIs, a typed provider client, and background workers, then integrated the service into the production mobile app for real customer transfers.
- Led the provider's formal certification across 7 blocks, 13 technical specifications, and 24 integration endpoints, validating each case against sandbox evidence and supporting the implementation with 137 automated unit and integration tests.
- Built secure payment processing with Azure SQL, Key Vault, Managed Identity, RSA/AES encryption, and SHA256withRSA signatures, implementing provider-response verification, pre-payment balance checks, transactional outbox retries, and reconciliation for successful, rejected, and unconfirmed transfers.
- Shipped the SPEI experience in .NET MAUI for Android and iOS, including recipient onboarding, CLABE/RFC validation, biometric authorization, duplicate-transfer prevention, offline handling, and receipt generation; improved production stability through Application Insights, global exception handling, and fixes for critical startup, threading, timeout, and session issues.
- Led the production web portal upgrade from Angular 19 to 21 and migrated 20+ components from PrimeNG to Kendo UI, introducing centralized permissions, route guards, and server-side token invalidation through incremental releases with zero production downtime.

- Modernized surrounding legacy systems by extending WPF/WCF back-office workflows, introducing Git and a standardized GitHub workflow across 5 legacy production systems and the new SPEI service, documenting the production database, and surfacing security and PCI-related findings that informed backend remediation.

Stack: .NET 10, ASP.NET Core, C#, .NET MAUI, Angular 21, TypeScript, WPF/WCF, Azure SQL, Kendo UI, Azure Key Vault, Application Insights, xUnit

Full-Stack Engineer · IFD Technologies Inc.

Remote | Oct 2025 - Apr 2026

- Selected to independently own a client project replacing an error-prone Excel-based fuel inventory process with a role-based web application, leading the engagement from initial discovery and requirements gathering through technical design, React/Laravel development, and client delivery.
- Led weekly client reviews and translated technical complexity into clear diagrams, tables, and business-friendly language, enabling stakeholders to validate requirements, resolve open questions, and make informed decisions throughout development.
- Delivered work across 5 simultaneous client accounts while adopting disciplined Scrum engineering practices, including testing, pull requests, iterative delivery, and regular client feedback cycles.

Stack: React, Laravel, TailwindCSS, REST APIs, GraphQL, Docker, AWS

Software Engineer · Cantilever

Mexico City | Apr 2024 - Oct 2025

- Built a native Android app in Kotlin supporting the field installation of IoT devices on telephone poles for CFE, using QR scanning for device identification, Bluetooth Low Energy (BLE) for configuration, and Telegram bots to coordinate and register the installation workflow.
- Designed and built a Java/Spring Boot microservice using Apache Kafka to process data from the IoT device ecosystem in biweekly billing cycles and calculate electrical network usage costs for CFE, using an event-driven design intended to address scalability limitations in the existing workflow.
- Introduced unit testing with Jest into a legacy Vue 2 codebase beyond LTS support, establishing automated test coverage for utility billing and meter-reading workflows.
- Built a Flutter mobile version of an existing web platform, adapting its core workflows for mobile use.
- Co-author of ICE Management 2.0, officially registered with INDAUTOR (Reg. No. 03-2025-112411030100-01).

Stack: Kotlin, BLE, Java, Spring Boot, Apache Kafka, Flutter, Vue.js, Nuxt.js, Vuex, GraphQL, Docker, Jest

Junior Developer · Teleurban

Mexico City | Jul 2022 - Apr 2024

- Developed and maintained internal business applications with Next.js and React, supporting operational workflows across multiple departments.
- Delivered new features, bug fixes, and system enhancements in collaboration with senior engineers.
- Contributed across frontend and backend codebases using React, Python, Java, C#, and PHP, gaining hands-on experience maintaining applications across different technology stacks.

Stack: Next.js, React, Python, Java, C#, PHP

PROJECTS

Tempo · Cross-Platform Booking Platform

Personal Project | iOS · Android · Web

Live Web App: tempo-cyan-alpha.vercel.app | Android on Google Play (closed testing)

- Built a cross-platform space-booking platform with a shared TypeScript frontend codebase for iOS, Android, and Web, featuring offline support, responsive layouts, dark mode, and per-client white-label theming.
- Designed a PostgreSQL booking engine using optimistic concurrency and idempotency keys to prevent overbooking and provide precomputed alternative slots when conflicts occur.
- Built the .NET backend and notification worker with JWT authentication, rotating refresh tokens, Google OAuth2/OIDC, encrypted token storage, rate limiting, and a Transactional Outbox for reliable waitlist and reminder delivery.
- Implemented a four-job GitHub Actions CI pipeline with ~121 PostgreSQL integration tests using Testcontainers, Jest, Docker builds, and Playwright end-to-end tests, and deployed the platform across Google Cloud Run, Neon PostgreSQL, Vercel, and Google Play.

Stack: React Native (Expo), React 19, TypeScript, NativeWind, TanStack Query, Zustand, .NET 10, ASP.NET Core, EF Core, PostgreSQL, Google Cloud, GitHub Actions, Docker, Playwright, xUnit
